

Work in progress

Team Manager
managerId: int record: List<ActivityLog> customProducts: List<CustomProduct> team: Team eActivityReport()
Admin
id: int name: String string id: int (hash) questions: List<QuestionResponse> customProducts: List<CustomProduct> rosterProducts: List<RosterProduct> provals: List<TeamPageRequest> record: List<ActivityLog> utilized: List<Order> eActivityReport()

1. Roster product Repo
2. Custom product Repo
3. Teams Repo
6. Invoice Repo

1. User will request ability to create team page and administrative abilities

2. If approved by admin, team will be created and its properties will be populated with the data sent in from the creation request
